BASED ON 1990 CENSUS DATA

By the NEW HAMPSHIRE OFFICE OF STATE PLANNING

PUBLISHED JUNE, 1992

This publication is intended to answer some frequently asked questions regarding the economic status of New Hampshire's communities. It contains five economic variables: 1) 1989 median family income (MFI); 2) 1989 per capita income (PCI); 3) dollar change in PCI from 1979 to 1989; 4) 1989 median household income; and 5) percent of persons in poverty.

All data in this report are taken from the 1980 or 1990 US decennial census. Data users that wish to know more about the data contained herein, may wish to consult publications prepared by the US Bureau of the Census.

Rank - When working with community level data, the user is frequently unable to put the information into perspective. For instance, it may be helpful to know that in 1989 Concord's median family income was estimated to be \$39,531; but this figure has more significance if it is known that 97 other communities in the State have higher income levels. The data user may readily determine the relative position of a given community by referring to the "rank" column which appears to the right of the data with which it is associated. The highest rank possible is 234, the number of communities in NH. Ranks are calculated on low to high basis. For instance, the town of Pittsburg is estimated to have a 1989 per capita income of \$11,212, with a rank of 17; this exceeds 16 other towns. Kingston's rank of 200, means that thirty-four other towns have a higher 1989 PCI. Equal values in the data DO NOT receive equal ranks. Equal values are assigned different ranks according to the alphabetical order of the community's name. (Note: The persons in poverty variable has the largest number of equal values. There are only 48 different poverty percentages.)

INCOME STATISTICS - USE WITH CAUTION

There are many ways to measure income; this report presents three different statements about income. Not presented here are such measures as hourly earnings, weekly wages or income aggregates.

Respondents to census forms were asked to report their income for the calendar year of 1989. The Census Bureau's definition of income includes: public assistance payments, self-employment income, net rental income, wages and salaries, Social Security and other retirement income, disability and other types of income. EXCLUDED from the Bureau's definition of income are: money received from the sale of property, "in kind" income from food stamps, public housing subsidies, medical care employer contributions, money borrowed, tax refunds, gifts and inheritances, insurance payments and other types of lump-sum payments.

The income measures in this report may not be directly comparable to statistics issued by other federal agencies. For instance the Bureau of Economic Analysis includes food stamps and Medicare payments, the Census Bureau does not. All agencies use different techniques and sources to gather data on income.

The measures themselves often contain inherent properties that reflect other characteristics besides income. Often these external properties are demographic in nature. For instance a preponderance of young adults will tend to lower median household income. This is because young adults have short work histories and garner less income than the more experienced work force. The presence of an institution with resident population (such as a college) has profound impact on per capita income (see below).

The Median - The median is a value, its POSITION in an array, divides a distribution into two equal parts. The median is affected very little by the presence of a few very wealthy households/persons in a community. This is why it is often used to describe income differences among places.

1989 Median Family Income - This is total money income received in calendar year 1989 by all family members 15 years of age and older. The data are tabulated for all families. Family income differs from household income by excluding income received by household members not related to the householder, persons living alone and others in nonfamily households.

1989 Median Household Income - This is total money income received in calendar year '89 by all household members 15 years old and over. All households are included in tabulations.

1989 Per Capita Income and '79 to '89 Change - This is mean income computed for every man, woman and child in a community, including those residing in institutions. It is derived by dividing the total income by total population.

Communities with significant institutional populations include:

New London	Stewartstown	Westmoreland	Ridge	Hanover
Plymouth	Goffstown	New Castle	Boscawen	Henniker
Brentwood	Greenfield	Unity	Newington	Durham

1980 Percent of Persons in Poverty - Persons are classified as being above or below the poverty level by comparing their total 1989 income to an income threshold. The thresholds vary by family size, number of children and age of the family householder or unrelated individual. Poverty status is not determined for persons living in institutions, members of the Armed Forces living in barracks and dormitory populations. The poverty thresholds below, are averages of 48 different thresholds. These thresholds vary by family size and age of householder (see census publications for more details).

Weighted Average Poverty Thresholds in 1989

Size of family unit	Threshold
One person (unrelated individual)	\$ 6,311
15 to 64 years	6,452
65 years and over	5,947
Two persons	8,076
Householder 15 to 64 years	8,343
Householder 65 years and over	7,501
Three persons	9,885
Four persons	12,675
Five persons	14,990
Six persons	16,921
Seven persons	19,162
Eight persons	21,328
Nine persons or more	25,480
